

AI Data Governance Health Check

Understand your data. Identify gaps.
Make informed decisions.

A focused review for boards and executive teams seeking a clearer view of their organisation's data, privacy, cyber security and AI risks.

Why it matters

Your organisation's data underpins its operations, decisions, customer trust, and use of AI.

Good governance helps to protect that data, meet your obligations, and support more confident business decision making.

The first step is understanding where you stand.

- ✓ Practical advice from experienced business consultants
- ✓ Secure, compliant, accountable
- ✓ ISO/IEC 27001 certified

What's included

Risk Appetite and Business Alignment

An assessment of your organisation's risk appetite for data and alignment with business objectives.

Policies and Procedures

A review of key cyber security, privacy and AI policies and procedures to identify gaps, and ensure they are fit-for-purpose.

Controls in Practice

An assessment of whether the controls documented across cyber security, privacy, and AI governance are in place and operating effectively.

Third-Party Risk

A review of key supplier contracts for data protection, privacy, security and AI obligations, responsibilities and gaps.

AI Use and Emerging Risks

Assessment of how AI is being used across the organisation and whether existing controls address risks such as data leakage, unauthorised tools, and AI-enabled cyber risks.

Output: A clear summary of key risks, gaps and recommended next steps.
